

Molafos® Dairy Transition

Molafos Dairy Transition is a palatable, molasses based pre calving production supplement containing magnesium, anionic salts and a sound mineral balance.

Molafos Dairy Transition Uses

- ✓ Energy, mineral and vitamin supplement for late gestation cows (prior to calving).
- ✓ Provides the cow with anionic salts which acidify the blood, precipitating the release of calcium preparing her for the nutritional demands of lactation.
- ✓ Used as a supplement for springing cattle, enabling them to build up body reserves of minerals that can be called upon after calving.
- ✓ Can be medicated with Monensin, Lasalocid or Flavophospholipol to improve feed efficiency
- ✓ Assists in providing dust suppression and providing a more consistent ration, texture and smell.

SUITABLE FOR SPECIES 

SUITABLE FOR CATEGORIES: Breeder and late gestation females

Molafos Dairy Transition Features

- The inclusion of Magnesium, salt and anionic salts in a palatable carrier such as molasses ensures cattle will accept these unpalatable but essential nutrients.
- Unique Molafos feed system- Excellent carrier of minerals, vitamins, supplements and medications
- Economical with balance of energy, minerals and vitamins.
- Ingredients are held in solution.
- Molasses based to supply sugars which stimulates appetite and boosts milk production.
- Flows at temperatures as low as -10°C.
- Contains a blend of Inorganic and Organic Minerals for improved availability and rumen bacterial health
- Rain safe.

Molafos Dairy Transition Benefits

- It prepares the cow for a higher feed intake regime to maximise milk production in early lactation.
- Palatable and accepted by stock on all country types.
- Controllable intake and cost allows for a budget to be compiled for the season.
- Suitable for all types of cattle regardless of body condition.
- Encourages stock to forage further and less selectively by promoting rumen bacteria function, ensuring enhanced forage utilisation, increased feed intake and digestion.
- Ultimate convenience with ease of use. Minimal labour required with flexibility in application.

Directions for Use

- Can be fed either by itself or mixed in a feed ration.
- Alternatively pour into open troughs and allow cattle free access.
- Feed out 3 day's supply and do not refill until the 4th day.
- Once intake has stabilised feed out 7 day's supply and do not refill until the 8th day.
- Do not feed to starving or thirsty stock.
- Locate feeding stations away from water to reduce intakes and encourage grazing out.

Intakes – These products can be fed directly to livestock at recommended feeding rates.

Adult Cattle: 1 to 3kilograms / head / day

1 litre Molafos = 1.32 kilograms

Molafos Dairy Transition – Analysis as Fed

Minimum Dry Matter	68%	Minimum Sulphur (S)	1.4%
Energy ME (Dry Matter)	10.5Mj/kg DM	Minimum Copper (Cu)	12mg/kg
Minimum Total Crude Protein	7.0%	Minimum Organic Copper (Cu)	6mg/kg
Minimum Crude Protein	3.0%	Minimum Cobalt (Co)	1.5mg/kg
Minimum Equiv Crude Protein	4%	Minimum Iodine (I)	10mg/kg
Maximum Urea	0%	Minimum Zinc (Zn)	300mg/kg
Minimum Calcium (Ca)	0.8%	Minimum Organic Zinc (Zn)	150mg/kg
Minimum Phosphorus (P)	0.5%	Minimum Manganese (Mn)	100mg/kg
Minimum Magnesium (Mg)	0.4%	Min Organic Manganese (Mn)	50mg/kg
Maximum Salt (NaCl)	3.0%	Minimum Selenium (Se)	2.2mg/kg
Minimum Vitamin E	50iu/kg	Minimum DCAD (Dry Matter)	-1232mEq/kg DM

Available Options – Monensin, Lasalocid and Flavophospholipol

WARNING

This product must be used in accordance with labeled directions. You must observe all directions, warnings and precautions noted in the instructions.

All medicated liquid supplements should be thoroughly agitated before use, either through mechanical mixing or recirculation on a daily basis.

Sodium Monensin is toxic to all Equines and Canines and should never be fed to these species.

Sodium Monensin and Lasalocid can be toxic to cattle and sheep and can be fatal if not fed in accordance with the instructions for use for this product.
